Re: Terrain Basin North
Traffic Impact Analysis
Castle Rock, CO
LSC #190430

Dear Mr. Jones:

In response to your request, LSC Transportation Consultants, Inc. has prepared this traffic impact analysis for the proposed Terrain Basin North portion of the overall Terrain master planned development. As shown on Figure 1, the site is located east and west of Castle Oaks Drive in Castle Rock, Colorado.

REPORT CONTENTS

The report contains the following: the existing roadway and traffic conditions in the vicinity of the site including the lane geometries, traffic controls, posted speed limits, etc.; the existing weekday peak-hour traffic volumes; the existing daily traffic volumes in the area; the typical weekday site-generated traffic volume projections for the site; the assignment of the projected traffic volumes to the area roadways; the projected site buildout and long-term background and resulting total traffic volumes on the area roadways; the site's projected traffic impacts; and any recommended roadway improvements to mitigate the growth in background traffic and from trips generated by the site.

LAND USE AND ACCESS

The site is proposed to include about 208 single-family detached dwelling units. Access is proposed to Castle Oaks Drive from multiple locations as shown in the conceptual site plan in Figure 2.

ROADWAY AND TRAFFIC CONDITIONS**Area Roadways**

The major roadways in the site's vicinity are shown on Figure 1 and are described below.

- **Founders Parkway** is a north-south four-lane state highway west of the site. The intersection with Crimson Sky Drive is stop-sign controlled with auxiliary turn lanes. A traffic signal warrant at this intersection is unlikely to be met until development occurs to the west of Founders Parkway. The posted speed limit is 50 mph in the vicinity of the site. It is classified by CDOT as RA (Regional Highway).
- **Crimson Sky Drive** is an east-west, two-lane collector roadway west of the site. The intersections with Founders Parkway and Autumn Sage Street are stop-sign controlled with auxiliary lanes. No speed limit is posted in the vicinity of the site.
- **Autumn Sage Street** is a two-lane collector roadway west of the site. The intersections with Castle Oaks Drive are stop-sign controlled. The posted speed limit is 30 mph in the vicinity of the site.
- **Castle Oaks Drive** is a two-lane roadway that passes through the site. The north half is paved and the south half is unpaved. The intersections with Autumn Sage Street are stop-sign controlled. No speed limit is posted in the vicinity of the site. The south half is proposed to be paved as part of site development with a reduced cross-section because the projected traffic volumes are expected to be relatively low.

Existing Traffic Conditions

Figure 3 shows the existing traffic volumes, lane geometry, posted speed limits, and traffic control in the site's vicinity on a typical weekday. The weekday peak-hour traffic volumes and average daily traffic volumes are from the attached traffic counts conducted by Counter Measures in May, 2019.

2024 and 2040 Background Traffic

Figure 4 shows the estimated 2024 background traffic based on minor adjustments of trips from Autumn Sage Street to Castle Oaks Drive after Castle Oaks Drive is paved. It also assumes one percent annual growth from 2019 to 2024 on all but Founders Parkway to maintain a conservative analysis even though the balance of the Terrain site in this area is primarily built out. An annual growth rate of two percent was assumed on Founders Parkway.

Figure 5 shows the estimated 2040 background traffic based on an annual growth rate of two percent on Founders Parkway from 2024 to 2040 and one percent on all internal Terrain streets to maintain a conservative analysis. It also assumes partial development of the unincorporated property west of Founders Parkway.

Existing, 2024, and 2040 Background Levels of Service

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection. Level of service is indicated on a scale from "A" to "F." LOS A is indicative of little congestion or delay and LOS F is indicative of a high level of congestion or delay. Attached are specific level of service definitions for unsignalized intersections.

The intersections in Figures 3, 4, and 5 were analyzed to determine the existing, 2024, and 2040 background levels of service using Synchro. Table 1 shows the level of service analysis results. The level of service reports are attached.

- **Founders Parkway/Crimson Sky Drive:** All movements at this unsignalized intersection currently operate at LOS "B" or better during both morning and afternoon peak-hours with the exception of the westbound left-turn movement which operates at LOS "F" and is expected to do so through 2040. All other movements are expected to operate at LOS "D" or better. A traffic signal warrant is unlikely to be met until development occurs to the west of Founders Parkway. There is existing connectivity to the exiting traffic signal at the intersection of Founders Parkway/Rising Sun Drive.
- **Castle Oaks Drive/Autumn Sage Street (North):** All movements at this unsignalized intersection currently operate at LOS "A" during both morning and afternoon peak-hours and are expected to operate at LOS "B" or better through 2040.
- **Autumn Sage Street/Crimson Sky Drive:** All movements at this unsignalized intersection currently operate at LOS "B" or better during both morning and afternoon peak-hours and are expected to do so through 2040.
- **Castle Oaks Drive/Autumn Sage Street (South):** All movements at this unsignalized intersection currently operate at LOS "A" during both morning and afternoon peak-hours and are expected to do so through 2040.

TRIP GENERATION

Table 2 shows the estimated average weekday, morning peak-hour, and afternoon peak-hour trip generation for the proposed site based on the rates from *Trip Generation*, 10th Edition, 2017 by the Institute of Transportation Engineers (ITE).

The site is projected to generate about 1,963 vehicle-trips on the average weekday, with about half entering and half exiting during a 24-hour period. During the morning peak-hour, which generally occurs for one hour between 6:30 and 8:30 a.m., about 39 vehicles would enter and about 116 vehicles would exit the site. During the afternoon peak-hour, which generally occurs for one hour between 4:00 and 6:00 p.m., about 129 vehicles would enter and about 76 vehicles would exit.

TRIP DISTRIBUTION

Figure 6 shows the estimated directional distribution of site-generated traffic volumes on the area roadways. The estimates were based on the location of the various planning areas with respect to the regional population, employment, activity centers, and the site's proposed land use.

TRIP ASSIGNMENT

Figure 7 shows the estimated site-generated traffic volumes based on the directional distribution percentages (from Figure 6) and the trip generation estimate (from Table 2).

2024 AND 2040 TOTAL TRAFFIC

Figure 8 shows the 2024 total traffic which is the sum of the 2024 background traffic volumes (from Figure 4) and the site-generated traffic volumes (from Figure 7). Figure 8 also shows the recommended 2024 lane geometry and traffic control.

Figure 9 shows the 2040 total traffic which is the sum of the 2040 background traffic volumes (from Figure 5) and the site-generated traffic volumes (from Figure 7). Figure 9 also shows the recommended 2040 lane geometry and traffic control.

Figure 10 shows the proposed typical cross-section for Castle Oaks Drive South. An attached eight-foot wide sidewalk is proposed on the west side of the roadway and on-street parking is proposed on the east side of the roadway adjacent to PA-17 which fronts the roadway.

PROJECTED LEVELS OF SERVICE

The intersections in Figures 8 and 9 were analyzed to determine the 2024 and 2040 total traffic levels of service. Table 1 shows the level of service analysis results.

- **Founders Parkway/Crimson Sky Drive:** All movements at this stop-controlled intersection are expected to operate at “D” or better through 2040 with the exception of the westbound left-turn movement which is expected to operate at LOS “F” during both peak-hours. A traffic signal warrant is unlikely to be met until development occurs to the west of Founders Parkway. There is existing connectivity to the exiting traffic signal at the intersection of Founders Parkway/Rising Sun Drive.
- **Castle Oaks Drive/Site Access #2:** All movements at this stop-controlled intersection are expected to operate at “B” or better during both morning and afternoon peak-hours through 2040.
- **Castle Oaks Drive/Autumn Sage Street (North):** All movements at this stop-controlled intersection are expected to operate at “B” or better during both morning and afternoon peak-hours through 2040.
- **Castle Oaks Drive/Crimson Sky Drive:** All movements at this stop-controlled intersection are expected to operate at “B” or better during both morning and afternoon peak-hours through 2040.
- **Castle Oaks Drive/Site Access #1:** All movements at this stop-controlled intersection are expected to operate at “B” or better during both morning and afternoon peak-hours through 2040.
- **Castle Oaks Drive/Site Access #3:** All movements at this stop-controlled intersection are expected to operate at “A” during both morning and afternoon peak-hours through 2040.
- **Castle Oaks Drive/Site Access #4:** All movements at this stop-controlled intersection are expected to operate at “A” during both morning and afternoon peak-hours through 2040.

- **Castle Oaks Drive/Autumn Sage Street (South):** All movements at this stop-controlled intersection are expected to operate at “B” or better during both morning and afternoon peak-hours through 2040.

CONCLUSIONS AND RECOMMENDATIONS

Trip Generation

1. The site is projected to generate about 1,963 vehicle-trips on the average weekday, with about half entering and half exiting during a 24-hour period. During the morning peak-hour, about 39 vehicles would enter and about 116 vehicles would exit the site. During the afternoon peak-hour, about 129 vehicles would enter and about 76 vehicles would exit.

Projected Levels of Service

2. All movements at the unsignalized intersections analyzed are expected to operate at LOS “D” or better during both peak-hours through 2040 with the following exception: The west-bound left-turn movement at the Founders Parkway/Crimson Sky Drive currently operates at LOS “F” during both peak-hours and is expected to do so through 2040. There is existing connectivity to the exiting traffic signal at the intersection of Founders Parkway/Rising Sun Drive.

Conclusions

3. A traffic signal warrant is unlikely to be met at the Founders Parkway/Crimson Sky Drive intersection until development occurs to the west of Founders Parkway.
4. The impact of the Terrain Basin North development can be accommodated by the existing roadway network with implementation of the recommendations below.

Recommendations

5. Figures 8 and 9 show two recommended turn lanes in the study area. A northbound left-turn lane is recommended on Castle Oaks Drive approaching Site Access #1 and a southbound right-turn lane is recommended on Castle Oaks Drive approaching Autumn Sage Street (North). The specific lengths are shown in Figures 8 and 9.
6. Castle Oaks Drive should be paved between Autumn Sage Street (North) and Autumn Sage Street (South) as a two-lane roadway as shown in Figure 10 to limit impacts to the corridor. The projected average daily traffic volume is below 1,500 vehicles per day which is appropriate for the proposed cross-section, back-out driveways, and no turn lanes.

* * * * *

We trust our findings will assist you in gaining approval of the Terrain Basin North development. Please contact me if you have any questions or need further assistance.

Sincerely,

LSC TRANSPORTATION CONSULTANTS, INC.

LEVEL OF SERVICE DEFINITIONS

From *Highway Capacity Manual, Transportation Research Board, 2016, 6th Edition*

UNSIGNALIZED INTERSECTION LEVEL OF SERVICE (LOS)

Applicable to Two-Way Stop Control, All-Way Stop Control, and Roundabouts

LOS	Average Vehicle Control Delay	Operational Characteristics
A	<10 seconds	Normally, vehicles on the stop-controlled approach only have to wait up to 10 seconds before being able to clear the intersection. Left-turning vehicles on the uncontrolled street do not have to wait to make their turn.
B	10 to 15 seconds	Vehicles on the stop-controlled approach will experience delays before being able to clear the intersection. The delay could be up to 15 seconds. Left-turning vehicles on the uncontrolled street may have to wait to make their turn.
C	15 to 25 seconds	Vehicles on the stop-controlled approach can expect delays in the range of 15 to 25 seconds before clearing the intersection. Motorists may begin to take chances due to the long delays, thereby posing a safety risk to through traffic. Left-turning vehicles on the uncontrolled street will now be required to wait to make their turn causing a queue to be created in the turn lane.
D	25 to 35 seconds	This is the point at which a traffic signal may be warranted for this intersection. The delays for the stop-controlled intersection are not considered to be excessive. The length of the queue may begin to block other public and private access points.
E	35 to 50 seconds	The delays for all critical traffic movements are considered to be unacceptable. The length of the queues for the stop-controlled approaches as well as the left-turn movements are extremely long. There is a high probability that this intersection will meet traffic signal warrants. The ability to install a traffic signal is affected by the location of other existing traffic signals. Consideration may be given to restricting the accesses by eliminating the left-turn movements from and to the stop-controlled approach.
F	>50 seconds	The delay for the critical traffic movements are probably in excess of 100 seconds. The length of the queues are extremely long. Motorists are selecting alternative routes due to the long delays. The only remedy for these long delays is installing a traffic signal or restricting the accesses. The potential for accidents at this intersection are extremely high due to motorist taking more risky chances. If the median permits, motorists begin making two-stage left-turns.
