

Sight line area. 4<sup>th</sup> St and Perry St.

North is toward the top of the page.

Orange line represents 25mph intersection sight line.

View looking north through sighting position along the sightline.

**Recommendation:** Best location for the sculpture to minimize blocking vehicle sight lines, is an area parallel to and further from the street than the existing tree, and perpendicular to the street in line with the electrical outlet. If located too close to the sidewalk, you block the sight line gap between the trees and parked cars, if closer to the street than the tree and you block another sight line approaching the intersection.
