---

Thanks for the note — there's a switch on the back that will cut power to the lights, can you turn it off until I can come take a look? My guess is one strand of leds got yanked on/chewed on. I'll see when I can come out, possibly next week.

Have a great weekend!

Joe

Hi Joe,

I hope you enjoyed the summer. John, who installed your piece with you, was doing a routine inspection and happened to notice that the lighting is out on one half of the wings. I apologize it isn't very easy to see this issue in the attached photo.

Anyhow, we wanted to bring this to your attention in the event you would wish to come out and take a look.

I've copied on this email Maia Aman, who has taken over my role as staff liaison to the Public Art Commission. If you plan to visit and need assistance from John in getting the piece down to evaluate, she'd be able to help arrange that.

Please let us know what you think, and thanks!
